

CLAIMS

1. A process for the preparation of a self-dispersing or self-emulsifying immediate release tablet comprising the following steps,
 mixing a granulation medium containing an active lipophilic substance with one or more non-swellable fillers and optional binders,
 granulation of said mixture into granules,
 drying of said granules,
 sieving of the granules into a size below 1 mm,
 mixing of the granules with tableting aids, and
 compressing said mixture into tablets, characterised in that the granulation medium comprises an oil, a surfactant selected from the group consisting of fatty acid esters of glycerol, and fatty acid esters of polyethylene glycol, and a polar liquid.
2. A process according to claim 1, characterised in that the granulation medium is a microemulsion.
3. A process according to claim 1, characterised in that the granulation medium is an emulsion.
4. A process according to claim 1, characterised in that the granulation medium is a liquid crystalline phase.
5. A tablet, characterised in being prepared by a process according to any of claims 1-4.
